

Cyanine3 alkyne

<http://www.lumiprobe.com/p/cy3-alkyne>

Cyanine3 alkyne is a bright and photostable fluorophore for click chemistry, an analog of Cy3®. This dye can be attached to nearly any molecule bearing azide group via copper-catalyzed click-reaction.

This alkyne is non-water-soluble. However, when used with organic co-solvent (DMSO or DMF), this dye can be efficiently attached to water-soluble molecules such as proteins or peptides.
