

VIC azide, 6-isomer

<http://www.lumiprobe.com/p/vic-azide-6>

VIC is an asymmetric xanthene dye with spectral properties similar to [HEX](#) and [JOE](#). Oligonucleotides labeled with VIC are often used in real-time PCR; the preparation of such oligonucleotides can be performed using click chemistry. This derivative is an azide, a pure 6-isomer, for conjugating VIC to other molecules by copper-catalyzed and copper-free click reactions.

Structure of VIC azide, 6-isomer

General properties

Appearance:	orange powder
Molecular weight:	637.86
Molecular formula:	C ₃₀ H ₁₉ Cl ₃ N ₄ O ₆
Solubility:	very soluble in DMSO, DMF
Quality control:	NMR ¹ H and HPLC-MS (95+%)
Storage conditions:	24 months after receipt at -20°C in the dark. Transportation: at room temperature for up to 3 weeks. Desiccate. Avoid prolonged exposure to light.
Legal statement:	This Product is offered and sold for research purposes only. It has not been tested for safety and efficacy in food, drug, medical device, cosmetic, commercial or any other use. Supply does not express or imply authorization to use for any other purpose, including, without limitation, in vitro diagnostic purposes, in the manufacture of food or pharmaceutical products, in medical devices or in cosmetic products.

Spectral properties

Excitation/absorption maximum, nm:	525
ε, L·mol ⁻¹ ·cm ⁻¹ :	103000
Emission maximum, nm:	546
Fluorescence quantum yield:	0.53
CF ₂₆₀ :	0.07
CF ₂₈₀ :	0.07
